

Face to face **Consultation on your Website**

It's very easy to get visitors to your own website for a video call with the employee they need. Direct contact with your customers from any desired page. Imagine how you can increase your reachability!

You set up so-called widgets. There are several types:

1. Basic Walk-in hours

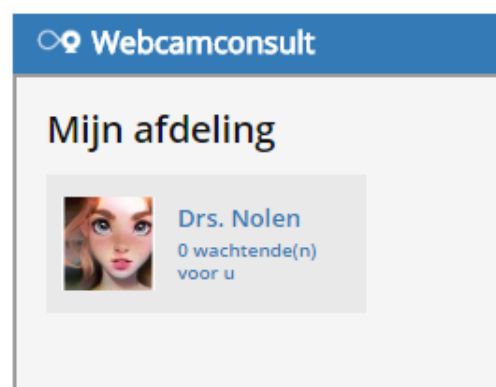

You can easily set everything up in the dashboard menus of your webcamconsult environment. In your own profile, please enter your contact title, name and photo, in the package menu you create a basic widget in the form of an embedded code. Your website administrator can then place this code on the desired page of your website.

2. Advanced Walk-in hours

If you choose more than just name and photo, the extended widget is possible. Step by step, you create a block with department selector, formatted texts on walk-in hours and absence text, by client data to enter, possibly logo and background images and colors, dimensions and possibly a professional markup code (Css).

3. Pop up walk-in hours

As a third variant we have the pop up version. This is similar to the "Can I help you" chat windows that you surely have encountered on the Internet. The popup Webcamconsult widget is as easy to create as the other widgets, however it always appears in the bottom right of the screen with a small bar, which comes up when you hover over it with the mouse. The visitor clicks on one of the available employees.
