

# Your “own” software in the cloud

The Webcamconsult platform is designed to respond to the wishes of the users.

Not only by the advanced functionalities around the video call with client or patient but mainly also by the use of **whitelabel** templates. You will present webcam consults in your company style!

With a whitelabel version of Webcamconsult you have the following options:

## 1. Your own look & feel

You can change the format of all application pages – includes menus- customize it to your own look & feel. This is preferably by your (bootstrap) css formatting. This will fit the entire application in your company style.

## 2. Your own web and mail domain

Normal users see the domain of webcamconsult.com with your chosen subdomain name, e.g. <https://yourhospital.webcamconsult.com>. With our whitelabel version we ensure that your own domain and subdomain applies, for Example: <https://videocall.yourhospital.com>.

We also ensure that all system mails are given the sender you want instead of [noreply@webcamconsult.com](mailto:noreply@webcamconsult.com), for example [videoconsult@yourhospital.com](mailto:videoconsult@yourhospital.com)

## 3. Customised work within your template

Within the whitelabel template we can customise and add special parts for YOU. You can think of a special video in the digital waiting room or a form that needs to be filled in before you come into the waiting room.

Your own “Video Consult Software in The Cloud”, tailor-made and seamlessly connected to your own website and business applications: EPD, ERP, CMS, CRM  
Also for partners who want to integrate webcam consult with their own software.
